

For those who likes to disable the "enter" key when submitting a form, well ... this script is not for you. But for all others who wants to know, simply add the following code to your page.

```
function disableEnterKey(evt) {  
    var evt = (evt) ? evt : ((event) ? event : null);  
    var node = (evt.target) ? evt.target : ((evt.srcElement) ? evt.srcElement : null);  
    if ((evt.keyCode == 13) && (node.type=="text")) {return false;}  
}  
document.onkeypress = disableEnterKey;
```
